OM protein - protein search, using sw model

Run on: January 29, 2004, 15:44:49; Search time 9.35661 Seconds (without alignments)

108-09-941-947A-18

Perfect score: 1623
Sequence: 1623
Sequence: 1623
Scoring table: BLOSUM62
Gapop 10.0, Gapext 0.5

Searched: 283308 seqs, 96168682 residues

Total number of hits satisfying chosen parameters: 283308

Minimum DB seq length: 0

Maximum DB seq length: 2000000000
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

0
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BG

"The lytB gene of Escherichia coli is essential and specifies a product needed for isoprenoid biosynthesis.";

J. Bacteriol. 183:7403-7407(2001).

-i- FUNCTION: Converts 1-hydroxy-2-methyl-2-(3)-butenyl 4-diphosphate into isopentenyl diphosphate (IPP) and dimethylallyl diphosphate (IMAPP). Is also involved in penicillin tolerance and control of the stringent response. Seems to directly or indirectly interact with relA to maintain it in an inactive form during normal growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "LytB, a novel gene of the 2-C-methyl-D-erythritol of isoprenoid biosynthesis in Escherichia coli."; FEBS Lett. 499:37-40(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "Identification of the Escherichia coli lytB gene, which is involved in penicillin tolerance and control of the stringent response."; J. Bacteriol. 175:1203-1205(1993).
